List of initiatives

Isle Utilities

Isle Utilities¹ is an independent technology and innovation consultancy that brings together technical and commercial specialists to facilitate relationships. Isle Utilities focuses on the following topics:

- Water
- Waste
- The built environment
- Energy
- Carbon

Isle Utilities uses this valuable expertise to identify technology deal-flow, undertake due diligence, provide market intelligence, and work with investors. Isle Utilities has extensive in-house experience in bringing new technologies to the market and an established framework to support innovation, technology development, strategy & growth, and investment.

Through their global innovation forum, the Technology Approval Group (TAG), they have a strong track record in identifying emerging technologies and accelerating their market uptake. The forum revolutionises the way new technologies are adopted and commercialized – connecting expertise, investment and inspired ideas to bring them to life.

Isle's core capabilities lie in:

- Identifying, qualifying and quantifying market opportunities;
- Identifying and assessing novel technological solutions;
- Facilitating relationships to accelerate technology development and commercialisation, including coordinating, managing and delivering innovation projects;
- Maintaining relationships with a large and diverse range of stakeholders.

Hydroko focused on presenting our HydroKonekt solution. This is the smart water management ecosystem that helps drinking water companies and end-users to optimally measure, control, manage and predict their water consumption levels. It is a modular drinking water metering and management solution that consists of two components: a hardware device called PiaBox, and a data platform called HydroSense. Beside this system Hydroko also focusses on the switch to plastic materials rather than brass to avoid the use of lead in drinking water applications.

Aquarama trade fare for water technology

Aquarama Trade Fair² is a trade show and conference about water technology and treatment for everyone involved in the industry and water sector. The event targets all stakeholders in that field. The conference offers interesting lectures from Watercircle.be, Essencia, VMw, AquaFlanders, Vlario, and CEBEDEAU on hot topics in the water sector.

The trade fair serves as a broad showcase of products and services. During Aquarama Trade Fair, trade show attendees and conference participants can network with exhibitors. Hydroko NV is one of the 100 exhibitors.

Hydroko focused on presenting our HydroKonekt solution. This is the smart water management ecosystem that helps drinking water companies and end-users to optimally measure, control, manage and predict their water consumption levels. It is a modular drinking water metering and management solution that consists of two components: a hardware device called PiaBox, and a data platform called HydroSense. Beside this system Hydroko also focusses on the switch to plastic materials rather than brass systems to avoid the use of lead in drinking water applications.

In the figures below the proof of attendance is shown.

International Water Association (IWA)

The International Water Association³ is an open but organized platform where both innovators and adopters of new technologies and approaches can generate creative friction. It is a place for dissemination, benchmarking, and evidence-building.

IWA's programs develop research and projects aimed at solutions for water and wastewater management. They organise events that bring the latest science, technology, and best practices to the water sector. IWA works to place water on the global political agenda and influence best practices in regulation and policymaking.

Hydroko participated in the IWA World Water Congress & Exhibition from September 11 to 15, 2022, in Copenhagen. The following topics were addressed during the congress:

- Water management for utilities

³ [All Events - International Water Association \(iwa-network.org\)](http://All Events - International Water Association (iwa-network.org))

- Wastewater and resource recovery
- Drinking water and reuse for consumption
- Urban-level and operations management
- Communities, communication, and collaborations
- Water sources and large-scale water management

In water management for utilities, the focus was on net-zero and neutral carbon water services and the circular economy.

Hydroko focused on presenting our HydroKonekt solution. This is the smart water management ecosystem that helps drinking water companies and end-users to optimally measure, control, manage and predict their water consumption levels. It is a modular drinking water metering and management solution that consists of two components: a hardware device called PiaBox, and a data platform called HydroSense. Beside this system Hydroko also focusses on the switch to plastic materials rather than brass to avoid the use of lead in drinking water applications.

In the figure below a screenshot of the registration at the IWA congress is shown as proof of attendance.

Utility week

Utility Week⁴ is a trade fair in the United Kingdom where more than 3000 professionals from the utility sector come together. Hydroko attended the event on May 21 and 22, 2023. During this event, there were 4 programs:

- Challenges
- Keynote
- Collaboration Exchanges
- Innovation

Hydroko focused on presenting our HydroKonekt solution. This is the smart water management ecosystem that helps drinking water companies and end-users to optimally measure, control, manage and predict their water consumption levels. It is a modular drinking water metering and management solution that consists of two components: a hardware device called PiaBox, and a data platform called HydroSense. Beside this system Hydroko also focusses on the switch to plastic materials rather than brass to avoid the use of lead in drinking water applications.

Hydroko won the 'pitch of the day' award at this event, see figures below.

HYDROKO

Stand: Isle | **Water 2030**

HydroKonekt® by Hydroko helps water utilities and end-users measure, control, manage, and predict water consumption levels. **It helps households save up to 25% on their water consumption while still providing the same comfort.**

It features **remote flow regulation** capabilities that can be activated in case of water scarcity, leakages, reverse flow, or burst alarms.

Besides standard digital water meter functionalities, it also features **pre-payment capabilities**, **water leak detection**-, and **leak localization** functionalities.

HydroKonekt also provides actionable information, monitors the condition of the network, and **integrates with existing systems.**

Water Innovation Europe

Water Innovation Europe⁵ aims to shape the future of water in Europe by providing new perspectives and insights from high-ranking EU decision-makers and experts in the water sector, and by highlighting the latest updates and trends in new water technologies.

⁵ [Water Innovation Europe – Water Europe](#)

From June 20 to 22, 2023, Hydroko participated in the conference. This year, Hydroko won the 'Water Innovation Europe SME Award' (see figure below). This award recognises companies that are innovative, both in terms of the solutions and technologies they create, and in how they position themselves and/or their solutions in the market.

Hydroko focused on presenting our HydroKonekt solution. This is the smart water management ecosystem that helps drinking water companies and end-users to optimally measure, control, manage and predict their water consumption levels. It is a modular drinking water metering and management solution that consists of two components: a hardware device called PiaBox, and a data platform called HydroSense. Beside this system Hydroko also focusses on the switch to plastic materials rather than brass to avoid the use of lead in drinking water applications.
